IDENTIFIERS	Congress 99th

ABSTRACT

The report compares U.S. Hispanic subgroups with regard to five demographic statistics: (1) Geographic Distribution: the greatest number of Hispanics are found in Texas, California, New York and Florida. (2) Age Structure and Fertility: Hispanics are generally younger than the U.S. population, except for Cubans who are usually older. Mexicans have the highest birth and fertility rates and Cubans the lowest. (3) Educational Attainment: Mexican and Puerto Rican adults have less education than the other subgroups. Younger Hispanic adults are better educated than their elders, but not as well-educated as the non-Hispanic population. (4) English Proficiency: Cubans are the most capable in English. (5) Occupations and Unemployment: Hispanic workers are underrepresented in higher level occupations and overrepresented in lesser skilled occupations. Mexicans have the lowest proportion of professionals and Cubans the highest. Cubans have greater employment stability and less unemployment. Data show that there are substantial differences between Hispanics and the total U.S. population, between non-Hispanic and Hispanic populations, and among Hispanic subgroups. The report recommends collecting data separately for Central Americans, South Americans and other Hispanics. (Author/PS)

LETTER OF TRANSMITTAL

HOUSE OF REPRESENTATIVES,
COMMITTEE ON POST OFFICE AND CIVIL SERVICE,
SUBCOMMITTEE ON CENSUS AND POPULATION,
Washington, DC, August 7, 1986.

Hon. WILLIAM D. FORD,
Chairman, Committee on Post Office and Civil Service, Cannon House Office Building, Washington, DC.

DEAR CHAIRMAN FORD: I am herewith transmitting a report prepared for the Subcommittee on Census and Population by the Congressional Research Service regarding Hispanic Population and Hispanic subgroups.

I requested this study because of the need for comprehensive source for timely information about the Hispanic population and the Hispanic subgroups. There was a report prepared on the Hispanic population in 1983, but the report was largely based on data accumulated prior to the 1980 Census. The report I am transmitting provides more up-to-date information.

I believe that this report along with the 1983 report will go a long way toward filling the information gap on the Hispanic population and the Hispanic subgroups. Accordingly, I request that this report be printed as a committee print.

Sincerely,

ROBERT GARCIA, *Chairman.*

FOREWORD

Hispanics are one of the fastest growing minorities in the nation and are increasingly being recognized as necessary players in the building of America's future. One consequence of the rapid growth of the Hispanic community is an increasing demand for information on the Hispanic population, and particularly information on the Hispanic subgroups. In response to that need, the subcommittee requested the Library of Congress to undertake a research on the Hispanic subgroups. Much research still needs to be done, but this report is a good beginning.

The 1980 Census of population and housing was the first time the Census Bureau included a question in the 100 percent questionnaire to identify Hispanics and to classify them according to the major national origin groups. Since 1980, there has been much progress made in the Census Bureau's efforts to make available information on the Hispanic population in the United States, especially detailed information on the Hispanic subgroups. Because each subgroup has differing needs, it is important that the differences are reflected in statistics used for public policy making. In 1983 there was a report prepared by the Congressional Research Service at the request of the Subcommittee on the Hispanic population, however, the information was largely based on data compiled before the 1980 Census. This report provides more up-to-date and more detailed information on the Hispanic population in America, especially information relating to the differences between the Hispanic subgroups.

It is the desire of this subcommittee that this report will assist the public in analyzing issues confronting the Hispanic community.

SUBJECT : Selected Demographic Characteristics of the U.S. Hispanic Population and of Hispanic Subgroups

The following report is provided in response to your request for information about selected demographic characteristics of the U.S. Hispanic population and of Hispanic subgroups.

In addition to the characteristics that the report presents (geographic distribution, age structure and fertility, educational attainment, English proficiency, and occupations and unemployment), you requested data about the housing and health status of Hispanics, broken down by subgroups. I searched extensively, but without success, for these data, by checking computerized bibliographies (SCORPIO and Popline) and the past six years of the Population Index (published by the Office of Population Research at Princeton University) and by checking with the Education and Public Welfare and Economics Divisions of CRS, as well as with the Housing and Demographic Analysis Division of the U.S. Department of Housing and Urban Development (HUD) and with the National Center for Health Statistics (NCHS).

The Housing and Demographic Analysis Division of HUD issued a report in June 1985 entitled Housing Problems in 1983. This report is based on the 1983

National Annual Housing Survey by the U.S. Bureau of the Census and HUD. The report contains a table specifying some housing problems of households headed by Hispanics. I requested that HUD do a special computer run to break down the data in this table by Hispanic subgroups (Mexicans, Puerto Ricans, Cubans, and other Hispanics). However, the sample for the survey is not large enough to provide this information. HUD told me that at this level of disaggregation the sizes of the subgroups in the survey would be too small to provide accurate, reliable data for the subgroups at the national level (for example, all Puerto Ricans in the United States or all Cubans in the United States), even though the survey data are reliable for Hispanics as an aggregate.

I checked with NCHS to learn the status of the Hispanic Health and Nutrition Examination Survey (HHANES), a probability sample survey of persons six months through 74 years of age who include Mexicans in five southwestern States, Puerto Ricans in the New York City area, and Cubans in the Miami area. I was told by NCHS that the data have been collected, but they are only partially available for Mexicans and will not be released for Puerto Ricans and Cubans until about the end of 1986.

I hope that this information will meet your needs. If I may be of further assistance, please call me, at 287-1773.

JDW:pjg

ABSTRACT

This report compares U.S. Hispanic subgroups with regard to the following selected demographic characteristics: distribution by State and by congressional district (99th Congress), age structure and fertility, education, English proficiency, and occupations and unemployment. Comparisons are also made between Hispanics as an aggregate and the total U.S. population, or, alternatively, between the Hispanic and non-Hispanic populations in the United States. The data show that there are substantial demographic differences between the Hispanic and the total U.S. populations, between the non-Hispanic and Hispanic populations, and among Hispanic subgroups.

SELECTED DEMOGRAPHIC CHARACTERISTICS OF THE U.S. HISPANIC POPULATION AND OF HISPANIC SUBGROUPS

INTRODUCTION

This report compares U.S. Hispanic subgroups with regard to the following selected demographic characteristics: distribution by State and by congressional district (99th Congress), age structure and fertility, education, English proficiency, and occupations and unemployment. Comparisons are also made between Hispanics as an aggregate and the total U.S. population, or, alternatively, between the Hispanic and non-Hispanic populations in the United States.

A total of 14,603,683 Hispanics, 6.4 percent of the U.S. population, were enumerated in the Census of Population and Housing, 1980. This total includes an unknown number of illegal immigrants 1/ and omits an undetermined number of additional illegals. Mexicans were the largest Hispanic subgroup enumerated (8,678,632). Next in size were other Hispanics (3,113,867), a category comprising persons who trace their origin or descent (ancestry) to countries where Spanish is the native language (except Mexico, Cuba, and the Commonwealth of Puerto Rico). The two remaining Hispanic subgroups enumerated in the 1980 census were Puerto Ricans (2,004,961) 2/ and Cubans (806,223).

1/ Although the number of illegal immigrants enumerated in the 1980 census in unknown, it has been estimated at somewhat over 2,000,000, a figure that includes an estimated 1,300,000 Latin Americans. (Davis, Cary, Carl Haub, and JoAnne Willette. U.S. Hispanics: Changing the Face of America. Washington, D.C., Population Reference Bureau, 1983. p. 9, 27.)

2/ Throughout this report, the term "Puerto Ricans" refers to persons living in the 50 States and the District of Columbia, not in Puerto Rico.

It should be pointed out that Hispanics are an ethnic group, not a racial group; they may be of any race. Moreover, the count of the Hispanic population may vary, depending on how the population is identified. Examples of identifiers are birth, parentage, surname, and native language. The 1980 census relied on self-identification of Hispanic origin or descent. 3/

The data for this report are from the U.S. Bureau of the Census, Census of Population and Housing, 1980, Current Population Reports, and Survey of Income and Education; the National Center for Health Statistics, Monthly Vital Statistics Report; the National Center for Education Statistics, High School and Beyond study; Development Associates and Research Triangle Institute, survey of students with limited English proficiency; and the U.S. Bureau of Labor Statistics, Employment and Earnings.

In the appendices and in several tables, Hispanics are disaggregated into the following subgroups: Mexicans, Puerto Ricans, Cubans, and other Hispanics. The rest of the tables separate Central and South Americans from other Hispanics; combine Cubans with other Hispanics; or present data separately for Mexicans, Puerto Ricans, and Cubans, but not for other Hispanics. These variations reflect differences in the disaggregation of Hispanics in the original sources of data.

EXECUTIVE SUMMARY

The data show that there are substantial demographic differences between the Hispanic and the total U.S. populations, between the non-Hispanic and Hispanic populations, and among Hispanic subgroups.

3/ Haub, Carl. The U.S. Hispanic Population: A Question of Definition. Intercom. v. 9, no. 11, Nov.-Dec. 1981. p. 8-11.

The distribution of Hispanics in the United States is uneven. Slightly more than half of all Hispanics (51.5 percent) live in California and Texas. Mexicans, the largest subgroup, are most concentrated in these two States, while Puerto Ricans are found mainly in New York, Cubans in Florida, and other Hispanics in California and New York. Of the ten congressional districts ranked highest in Hispanic population and Hispanics as a proportion of total district population, half are in Texas (the 15th, 16th, 20th, 23rd, and 27th districts), three in California (the 25th, 30th, and 34th districts), one in New York (the 18th district), and one in Florida (the 18th district). Puerto Ricans are the dominant Hispanic subgroup in the 18th district of New York, as Cubans are in the 18th district of Florida. Mexicans predominate in the eight other districts.

Hispanics generally, and all except one Hispanic subgroup, are younger than the U.S. population, whose median age is 30.4 years, compared with 23.7 years for Hispanics and about 22 years for Mexicans and Puerto Ricans. Only Cubans, with a median age of 38.1 years, exceed the median age of the U.S. population.

Among Hispanic subgroups, Mexicans have the highest birth and fertility rates, whereas Puerto Ricans have the highest proportion of births to unmarried women (48.0 percent). At the opposite extreme, birth and fertility rates and the percent of births to unmarried women are lower for Cubans than for non-Hispanics.

Mexican and Puerto Rican adults (aged 25 years and older) have less educational attainment than Cuban, Central or South American, and other Hispanic adults. The latter subgroup has completed about the same median number of school years (12.3) as U.S. adults (12.5), but has a considerably lower proportion of high school graduates (58.0 percent) than the U.S. adult population (69.7 percent).

Younger Hispanic adults (25 through 34 years old), in the aggregate and by subgroups, are better educated than their elders. Over half of each younger adult subgroup have graduated from high school. The proportion is lowest for Mexicans (52.8 percent) and highest for Cubans, Central or South Americans, and other Hispanics (73.6 percent). Nevertheless, the discrepancy in education, particularly college education, between the U.S. and Hispanic populations tends to increase at the younger ages.

According to survey data on Hispanic high school sophomores and seniors, by subgroups, Cubans are the most likely to report being proficient in English, but the least likely to report that English was their native language or their only language before they started school. Survey data on adult Hispanic subgroups (22 through 51 years old) indicate that 80.0 percent of Cubans, 59.1 percent of Puerto Ricans, 39.0 percent of Mexicans, and 33.8 percent of other Hispanics speak predominantly or exclusively Spanish at home. Spanish usage is, of course, much more evident among Hispanic immigrants than among Hispanics who are U.S. natives.

Hispanic workers, compared with all U.S. workers, are statistically underrepresented at the upper end of the occupational scale and statistically overrepresented in lesser skilled occupations. Mexicans are the subgroup with the lowest percent of professional workers, and Puerto Ricans have the lowest proportion of managers. A fifth of Mexican and Puerto Rican workers are nontransport operatives. Two better educated subgroups, Cubans, followed by Central or South Americans and other Hispanics, have the highest proportions of professional workers (15.2 percent and 12.7 percent, respectively, compared with 17.2 percent of U.S. workers). However, Cubans, together with Mexicans and Puerto Ricans, are twice as likely as all U.S. workers to be nontransport operatives, and Central or South Americans and other Hispanics are the subgroup most concentrated in service occupations.

Finally, Cubans tend to have greater employment stability than Mexicans or Puerto Ricans. In 1984, average annual unemployment rates were 13.3 percent for Puerto Ricans, 10.8 percent for Mexicans, and 7.9 percent for Cubans. The latter rate differed little from that in the U.S. labor force (7.5 percent).

These pronounced demographic differences indicate that Hispanics should be analyzed by subgroups, not simply as an aggregate. In particular, the study of Hispanics would be furthered by the collection and presentation of data separately for Central Americans, South Americans, and other Hispanics, because this category is large and diverse.

SELECTED DEMOGRAPHIC CHARACTERISTICS

The Distribution of Hispanics in the United States

The distribution of all Hispanics and of Hispanic subgroups, by State and by congressional district (99th Congress), is presented in Appendices A through C. The data were derived from the U.S. Bureau of the Census, Census of Population and Housing, 1980. 4/ Appendix A shows the number and percent of the total Hispanic population and of each Hispanic subgroup who live in each State. The States are ranked according to these figures, with one being the highest rank. Appendix B gives, for every State, the number of Hispanics and of each Hispanic subgroup in the State, the percent of the State's total population whom Hispanics and Hispanic subgroups represent, and the ranks by number and

---

4/ U.S. Dept. of Commerce. Bureau of the Census. Data User Services Division. Census of Population and Housing, 1980. Summary Tape Files (STF) 3D, 3H. Washington, D.C., Bureau of the Census, 1982. STF 3D has data for the 98th Congress, and STF 3H has data for the States where congressional district boundaries changed for the 99th Congress.

percent. The same information, by congressional district, is found in Appendix C. The ranks of congressional districts are for the entire United States, not for the States separately. In Appendices B and C, there is less-than-perfect agreement between the ranks by number and those by percent, because the ranks by number do not take into account variations in total population size among the States and congressional districts, whereas the ranks by percent control for total population size.

As Appendix A shows, Hispanics are found in every State, including Alaska and Hawaii, but their distribution is uneven. California contains the most Hispanics (4,541,300), while Vermont has the fewest (3,377). Slightly more than half of all Hispanics (51.5 percent) are located in just two States, California and Texas. They, together with New York, Florida, Illinois, and New Jersey, contain over three-quarters of the Hispanic population (76.5 percent).

The breakdown of Hispanics by subgroups in Appendix A shows that Mexicans are most concentrated in California and Texas, Puerto Ricans in New York, Cubans in Florida, and other Hispanics in California and New York.

Among the six States ranked highest in number and percent of Mexicans, only Illinois (ranked third, with 404,543 Mexicans, or 4.7 percent of this subgroup) is outside the Southwest. California and Texas contain almost three-quarters of the Mexican population (73.3 percent). An additional tenth (9.6 percent) live in Arizona, New Mexico, and Colorado.

Nearly half of Puerto Ricans (48.8 percent) are located in New York, and another 12.1 percent live in New Jersey. A fifth of Puerto Ricans (20.4 percent) are found in Illinois, Florida, California, and Pennsylvania.

Cubans are heavily concentrated in Florida. Over half of them (58.2 percent) live there, and another third (32.3 percent) are located in New Jersey, New York, California, Illinois, and Texas.

Other Hispanics, being a diverse subgroup, are more dispersed than Mexicans, Puerto Ricans, or Cubans. Nevertheless, two States (California and New York) account for 42.8 percent of the other Hispanic population, while New Mexico, Florida, Texas, and New Jersey contain over a quarter (26.4 percent) of this population.

The Hispanic population as a proportion of each State's total population ranges from a high of 36.6 percent in New Mexico to a low of 0.5 percent in Maine (see Appendix B). Like New Mexico, the other States where Hispanics constitute more than a tenth of the population are all in the Southwest: Texas is 21.0 percent Hispanic; California, 19.2 percent; Arizona, 16.3 percent; and Colorado, 11.8 percent. Hispanics approach a tenth of the population of New York (9.4 percent) and Florida (8.8 percent).

With respect to Hispanic subgroups (see Appendix B), New York ranks highest in both the size of its Puerto Rican population and the proportion of total State population represented by Puerto Ricans. Likewise, Florida ranks first in the number of Cubans and in Cubans as a percent of total population. However, no other State ranks first on these two measures. While California has the most Mexicans, Texas ranks first in the percent of the population that is Mexican. Other Hispanics are most numerous in California, but they form the largest share of total State population in New Mexico.

Mexicans make up over a tenth of the population of four Southwestern States: Texas (19.3 percent), New Mexico (17.6 percent), California (15.3 percent), and Arizona (14.6 percent). They constitute less than 5.0 percent of the population of every other State but Colorado, which is 7.1 percent Mexican.

New York ranks first in the proportion of total State population that is Puerto Rican (5.6 percent). New Jersey, where Puerto Ricans are 3.3 percent

of the population, ranks second. In only four remaining States do Puerto Ricans make up more than 1.0 percent of the population: Connecticut (2.8 percent), Hawaii (2.1 percent), Massachusetts (1.3 percent), and Illinois (1.2 percent).

Cubans account for less than 0.5 percent of the population of each State except Florida and New Jersey. In these two States, Cubans comprise 4.8 percent and 1.2 percent, respectively, of the population.

New Mexico has by far the largest proportion of other Hispanics in its population (18.9 percent). In Colorado, the State with the next-highest proportional rank, other Hispanics are just 4.5 percent of the population.

The 15th congressional district of Texas, which takes in much of the lower Rio Grande River Valley, including Hidalgo, Starr, and Zapata Counties along the Mexican border, ranks first among all congressional districts in the size of its Hispanic population and in Hispanics as a proportion of total district population (378,189 and 71.8 percent, respectively). The eighth district of Minnesota, an area bordered by Lake Superior to the northeast and Canada to the north, contains the fewest Hispanics (1,592) (see Appendix C).

Of the ten districts where Hispanics are most important numerically and in proportion to total district population, half are in Texas, three in California, one in New York, and one in Florida. The districts in Texas, besides the 15th, are the 16th, including El Paso on the Mexican border and several counties to the east; the 20th, encompassing the central part of San Antonio; the 23rd, which includes the border city of Laredo and several border counties; and the 27th, extending from Corpus Christi to Brownsville, a border city in the southernmost part of the State. The 25th, 30th, and 34th districts of California include parts of the city and suburbs of Los Angeles. The 18th district of New York centers on the South Bronx; and the 18th district of Florida covers much of Miami, plus Miami Beach, Bal Harbour, Key Biscayne, and Coral Gables.

Mexicans are the dominant Hispanic subgroup in each of these districts except the 18th districts of New York and Florida. The 15th district of Texas, where 363,691 Mexicans constitute 69.0 percent of the population, ranks highest nationwide in number of Mexicans and their proportion of total district population. Mexicans also make up over half the population of the 16th, 20th, 23rd, and 27th districts of Texas and the 25th district of California. The 18th district of New York ranks first in the number of Puerto Ricans and in Puerto Ricans as a proportion of total population (216,093 and 41.8 percent, respectively). The 18th district of Florida has the highest numerical and proportional ranking for Cubans (195,372 and 38.1 percent, respectively). The other Hispanic subgroup is most numerous and accounts for the largest share of the population in the third district of New Mexico (125,316 and 29.0 percent, respectively).

Age Structure and Fertility

Table 1 shows that Hispanics as an aggregate, and all except one Hispanic subgroup, are younger than the U.S. population. The median age of the U.S. population is 30.4 years, compared with 23.7 years for Hispanics. A quarter of the U.S. population, but a third of Hispanics, are under age 16, and the proportion of persons over age 64 is nearly three times greater in the U.S. population than among Hispanics (11.1 percent versus 4.0 percent). Mexicans and Puerto Ricans, whose median age is about 22 years, are the youngest Hispanics, while Cubans are the oldest. Their median age (38.1 years) exceeds that of any other Hispanic subgroup and of the U.S. population; they also have the highest proportion (12.1 percent) over age 64. The proportions of Mexicans and Puerto Ricans under age 16 are twice the proportion of Cubans in this age category (36.7 percent, 35.7 percent, and 17.1 percent, respectively).

The youthfulness of non-Cuban Hispanics results from high fertility that is, in turn, due to several other factors: large-scale legal and illegal immigration of non-Cuban Hispanics, including many young adults, who are likely to have children; and a tendency for Mexicans and Puerto Ricans to have low educational and income levels, which are associated with high fertility as well as high proportions of births to unmarried women. 5/

TABLE 1. Selected Age Characteristics of the U.S. Population, the Hispanic Population, and Hispanic Subgroups, 1982

Age characteristic	United States	Hispanic					
		Total	Mexican	Puerto Rican	Cuban	Central or South American	Other
Percent under age 16	24.2	34.1	36.7	35.7	17.1	28.6	29.2
Percent over age 64	11.1	4.0	3.3	2.7	12.1	3.0	7.9
Median age (years) a/	30.4	23.7	22.2	22.0	38.1	26.8	27.9

a/ The median divides the population into two equal parts, half above and half below this number. (Shryock, Henry S. and Jacob S. Siegel. The Methods and Materials of Demography. New York, Academic Press, 1976. p. 132.)

Source: U.S. Dept. of Commerce. Bureau of the Census. Current Population Report P-20, no. 396. Persons of Spanish Origin in the United States: March 1982. Washington, D.C., U.S. Govt. Print. Off., 1985. p. 12.

5/ Davis, Haub, and Willette, U.S. Hispanics, p. 9-10, 16, 29. Ventura, Stephanie J. Births of Hispanic Parentage, 1981. NCHS Monthly Vital Statistics Report. v. 33, no. 8, supplement, Dec. 11, 1984. p. 3, 11.

Estimates of Hispanic fertility are difficult to obtain, partly because systematic registration of births by Hispanic parentage has taken place only since 1978 and covers just 22 States 6/ (see Table 3). Nevertheless, almost 95.0 percent of estimated Hispanic births nationwide in 1981 occurred in these States. 7/ Hispanic birth and fertility rates have been published for 11 States, listed in Table 2, for which the necessary population denominators (estimates of the Hispanic population by age, sex, and subgroup) were obtained from the U.S. Bureau of the Census, Current Population Survey, and were made available by the Bureau to the National Center for Health Statistics. 8/ The 11 States accounted for slightly over 90.0 percent of Hispanic births estimated for the United States in 1981. 9/

As Table 2 shows, birth rates and fertility rates in the 11 States in 1981 were higher for Hispanics overall, and for virtually every Hispanic subgroup, than for non-Hispanics. Non-Hispanics had a birth rate (number of live births per 1,000 persons) of 15.2, compared with 24.1 for Hispanics. The fertility rates (a fertility rate being the number of live births per 1,000 women 15 through 44 years old) of the two populations were 65.0 for non-Hispanics and 97.5 for Hispanics. Among Hispanic subgroups, Mexicans and Cubans were at opposite extremes of fertility. Mexicans had the highest birth and fertility rates (26.9 and 112.3, respectively), but the Cubans' birth rate of 10.9 and fertility rate of 47.2 were lower than the rates for non-Hispanics.

Cubans were also the only Hispanic subgroup with a lower proportion of births to unmarried women than the proportion for non-Hispanics in 22 States in 1981 (see Table 3). A fifth of non-Hispanic births, a quarter of the births in the Hispanic population, and roughly half of Puerto Rican births occurred among unmarried women, whereas 14.3 percent of Cuban births were in this category.

Education

Although younger Hispanics remain in school longer than their elders did, Hispanics in general, and the Hispanic subgroups for whom data are shown in Tables 4 and 5, have less educational attainment than the U.S. population.

As set forth in Table 4, which presents data for persons aged 25 years and older, the median numbers of school years completed by the U.S. and Hispanic populations are 12.5 and 11.0, respectively. Over two-thirds of U.S. adults (69.7 percent), but fewer than half of Hispanic adults (45.9 percent), are high school graduates, and there is a substantial difference in the proportions of the two populations who have attended college for at least a year (32.1 percent of the U.S. population versus 18.7 percent of Hispanics). Mexicans have the

TABLE 4. Measures of Educational Attainment for the U.S. Population, the Hispanic Population, and Hispanic Subgroups, Aged 25 Years and Older

Measure	United States	Hispanic			
		Total	Mexican	Puerto Rican	Cuban, Central or South American, and Other
Percent of high school graduates	69.7	45.9	40.8	42.2	58.0

Washington, D.C., U.S. Govt. Print. Off., 1984. p. 27. Data for Hispanics are from U.S. Dept. of Commerce. Bureau of the Census. Current Population Report P-20, no. 396. Persons of Spanish Origin in the United States: March 1982. Washington, D.C., U.S. Govt. Print. Off., 1985. p. 16.

lowest median number of school years completed (9.9) and the lowest proportion of high school graduates (40.8 percent); however, the proportion of Puerto Ricans with high school degrees (42.2 percent) is only slightly higher. The median number of school years completed by Cubans, Central or South Americans, and other Hispanics (12.3) is about the same as the median for the U.S. population, and high school graduates constitute a higher proportion of this subgroup (58.0 percent) than of Mexicans or Puerto Ricans.

For Hispanics in the aggregate, and for every Hispanic subgroup, the educational attainment of younger adults, 25 through 34 years old (see Table 5), exceeds that of older adults. Unlike their elders, half of younger Hispanics

Median school years completed a/	12.9	12.2	12.1	12.3	12.6

a/ The median divides the population into two equal parts, half above and half below this number. (Shryock, Henry S. and Jacob S. Siegel. The Methods and Materials of Demography. New York, Academic Press, 1976. p. 132.)

Sources: Data for the U.S. population are from U.S. Dept. of Commerce. Bureau of the Census. Current Population Report P-20, no. 390. Educational Attainment in the United States: March 1981 and 1980. Washington, D.C., U.S. Govt. Print. Off., 1984. p. 27. Data for Hispanics are from U.S. Dept. of Commerce. Bureau of the Census. Current Population Report P-20, no. 396. Persons of Spanish Origin in the United States: March 1982. Washington, D.C., U.S. Govt. Print. Off., 1985. p. 16.

have completed over 12.2 school years, and the median number of school years completed is above 12 for all younger Hispanic subgroups as well. Another feature distinguishing younger from older subgroups is that more than half of

each subgroup 25 through 34 years old are high school graduates. The range is from 52.8 percent for Mexicans to 73.6 percent for Cubans, Central or South Americans, and other Hispanics.

However, the gap in education, especially college education, between the U.S. and Hispanic populations tends to widen at the younger ages. Table 5 shows that while 85.6 percent of the U.S. population 25 through 34 years old have high school degrees, the comparable figure for Hispanics is 58.3 percent, and the proportion of the U.S. population with some college education is almost double the proportion of Hispanics who have attended college (44.9 percent versus 23.8 percent). In only one measure of educational attainment has the gap narrowed between the U.S. and Hispanic populations aged 25 through 34 years: the median number of school years completed by Hispanics approaches the U.S. median of 12.9.

Another pattern evident in Tables 4 and 5 is that educational attainment is consistently higher in the Cuban, Central or South American, and other Hispanic subgroup than among Mexicans or Puerto Ricans. The contrast has been attributed to the preponderance of the middle class among early Cuban refugees and recent legal immigrants from Central and South America. 10/

Extent of English Proficiency

Although difficulty understanding English and communicating in it is considered to be a major liability for Hispanics in school and in the U.S. labor market, 11/ a precise way to define and assess English proficiency or the

lack thereof is elusive. 12/ Great variations in how the terms "English proficiency" or "limited English proficiency" are defined and measured have led, for example, to widely ranging estimates (from 700,000 to 3,600,000) of the number of school-age children throughout the United States who have limited English proficiency. 13/

Following is a summary of survey data on the extent of English proficiency among Hispanic children and adults, by subgroups, in the United States. As might be expected, the surveys do not treat the subject identically.

A report by Development Associates and Research Triangle Institute estimated that there were 882,000 public school students in kindergarten through grade six who, according to criteria set by their school districts, had limited English proficiency in the fall of 1983. Spanish was the native language of about 76.0 percent of these students. 14/ Approximately 724,000 of the students were receiving special language-related instruction, including, but not limited to, bilingual education. 15/

Data for this report are from a four-stage national probability sample of 191 public school districts in 19 States. Within these districts, 1,665 first and third grade students from 520 schools were sampled. 16/ The findings are generalizable only to public elementary schools having 12 or more first or third grade students with limited English proficiency in the autumn of 1983, when the

data were collected. 17/ Such schools enroll about 82.0 percent of kindergarten and elementary students with limited English proficiency nationwide. 18/ Definitions of "limited English proficiency" varied across the school districts sampled, but proficiency was ascertained mainly by tests of speaking, reading, and writing English and by judgments of school or district personnel. 19/

Spanish was the native language of 78.0 percent of the 1,665 students in the sample. Of these 78.0 percent, Mexicans accounted for 74.0 percent; Puerto Ricans, 11 percent; Cubans, 2.0 percent; and other Hispanics, 12.0 percent. 20/

Data from the first phase of High School and Beyond, a longitudinal survey of U.S. high school sophomores and seniors, done in 1980 for the National Center for Education Statistics, provide information about the English proficiency of 6,698 Hispanic students (3,521 sophomores and 3,177 seniors), by subgroups. 21/ The first phase involved a two-stage national probability sample, in which certain types of schools (for example, those with high proportions of Hispanic, especially Cuban, students) were oversampled, that is, given a higher probability of selection into the sample. 22/ The researchers noted that since high school dropout rates for Hispanics tend to be substantial and that because the data exclude persons who dropped out before their sophomore or senior year, the findings probably understate the academic problems encountered by Hispanic high school students; therefore, generalizations to the entire Hispanic population

of the same ages as the high school sophomores and seniors in the sample should be made "with extreme caution." 23/

Using a scale that ranged from 4 to 1, in which 4 represented "very well" and 1 represented "not at all," the Hispanic students in the survey (persons who were enrolled in high school, either as sophomores or as seniors) assessed their own ability in each of four categories of English proficiency: understanding, speaking, reading, and writing English. When summed, the scores for the four categories yielded a composite indicator of each student's self-assessed English proficiency. The scores ranged from a possible maximum of 16 (greatest proficiency) to a minimum of 4 (no proficiency). In the subsample of high school sophomores, Cubans had the highest average self-assessment score (15.2), followed by other Hispanics (15.0), Puerto Ricans (14.9), and Mexicans (14.7). Among high school seniors, Cubans also had the highest score (15.0), with Mexicans (14.8), Puerto Ricans (14.7), and other Hispanics (14.6) next in order. 24/

The slightly higher self-assessment scores for Cubans may be noteworthy because Cubans, whose families were characterized by post-1959 immigration, were the least likely to report that English was their native language, and their only language, before they began school (see Table 6). Just 21.4 percent of Cuban high school seniors were in this category, compared with 29.4 percent of Puerto Ricans, 46.3 percent of Mexicans, and 72.8 percent of other Hispanics. At the opposite extreme, 39.9 percent of Cuban seniors spoke Spanish exclusively until they entered school. The proportions of the remaining Hispanic seniors

in the Spanish-only category were much lower: 23.8 percent of Puerto Ricans, 13.9 percent of Mexicans, and 10.5 percent of other Hispanics. As the researchers observed,

> . . . it is tempting to speculate that the effect of the higher socioeconomic status of Cuban families may be sufficient to compensate for the presumed handicap in school associated with loyalty to a non-English language and recent immigration. 25/

Special tabulations from the Survey of Income and Education, a survey conducted in 1976 by the U.S. Bureau of the Census, use language spoken at home to gauge the extent of English proficiency among adult Hispanics as an aggregate and among adult Hispanic subgroups (see Table 7). The data refer to persons 22 through 51 years old. English proficiency appears to be low for a sizable proportion (42.5 percent) of Hispanics, whose usual, or only, language at home is Spanish. Lack of proficiency is, of course, much more evident among Hispanic immigrants than among Hispanics who are natives of the United States. Over two-thirds of the immigrants (68.4 percent), but about a quarter of the natives (25.7 percent), speak Spanish usually, or exclusively, in their homes. Cubans, followed by Puerto Ricans, appear to be the least proficient in English. Eighty percent of Cubans and 59.1 percent of Puerto Ricans, compared with 39.0 percent of Mexicans and 33.8 percent of other Hispanics, speak predominantly, or only, Spanish at home. Among native Hispanic subgroups, the proportions speaking Spanish at home range from 27.4 percent of Mexicans to 20.4 percent of Puerto Ricans. In each subgroup, as in the entire Hispanic population, natives are far more likely than immigrants to be proficient in English.

While Cuban immigrants' lack of English proficiency, suggested by the findings from the Survey of Income and Education, would seem to hinder them in the U.S. labor market, this is not necessarily the case. The occupational and unemployment data for Cubans (which are shown in Tables 8 and 9 and discussed

Unemployed (in thousands)	8,539	676	419	95	38
Unemployment rate a/	7.5	10.6	10.8	13.3	7.9

a/ The unemployment rate is the number of unemployed persons as a percent of the labor force.

Source: U.S. Dept. of Labor. Bureau of Labor Statistics. Employment and Earnings. v. 32, no. 1, Jan. 1985. p. 198-199.

The labor force comprises employed persons and persons who are unemployed, but seeking work.

under "Occupations and Unemployment," but are not broken down by nativity) indicate that Cubans generally have higher occupational status and lower unemployment than Mexicans or Puerto Ricans. There are at least two possible reasons why retention of Spanish may not impede Cuban immigrants' progress in the U.S. labor market, although the data on this topic are by no means conclusive. First, language usually, or always, spoken at home may be a less-than-ideal indicator of English proficiency, because aptitude in Spanish may not preclude aptitude in English; on the contrary, the previously discussed High School and Beyond study found a positive association between Spanish and English proficiency. 26/ Second, even if Cuban immigrants actually do lack English proficiency, early Cuban refugees' relatively high socioeconomic status, including educational attainment, in their country of origin may have carried over to the United States and compensated for any deficiencies in English. 27/

Occupations and Unemployment

The occupations of Hispanics as a whole and of Hispanic subgroups are largely consistent with their educational attainment. The same point applies to unemployment, which is also affected by age structure. Older workers usually have more marketable skills and greater stability in the labor market than younger workers. 28/ Thus, Cubans, who are better educated, older workers, generally surpass the occupational status and employment stability of Mexicans

27/ Ibid., p. 56.

28/ U.S. Library of Congress. Congressional Research Service. Hispanics in the U.S. Labor Force: A Brief Examination, Report No. 84-130 E, by Dennis M. Roth. Washington, D.C., Aug. 1, 1984. p. 7-8.

or Puerto Ricans. While 59.7 percent of the Cuban labor force is at least 35 years old, just 38.6 percent of the Mexican labor force and 45.4 percent of the Puerto Rican labor force are in this age category. 29/ Puerto Ricans have the additional disadvantage of being concentrated in areas with slowly growing economies; New York City is a prime example. 30/

Table 8 shows that Hispanics are much less likely than all U.S. workers to be at the upper end of the occupational scale and much more likely to be lesser skilled nontransport operatives (machine operators, including assemblers, dressmakers, garage workers, packers, sewers, etc.). Professional and technical workers account for 17.2 percent of employed persons in the United States, almost double the proportion among Hispanic workers (8.8 percent). Hispanics are similarly underrepresented as managers and administrators. Nearly 12.0 percent of U.S. workers, but just 6.3 percent of employed Hispanics, are so classified. In contrast, while a tenth of all U.S. workers are nontransport operatives, a fifth of employed Hispanics are so classified.

Mexicans, with the least educational attainment of any Hispanic subgroup, are the most statistically underrepresented in professional and technical occupations (6.8 percent), have a low proportion of managers and administrators (5.9 percent), and have the highest proportion of farm laborers (4.7 percent). While the latter figure is about five times greater than recorded for U.S. workers, 1.0 percent of whom are farm laborers, it is far lower than the stereotype of the Mexican worker suggests. Nevertheless, the Current Population Survey, from which these data were taken, may have understated the number of Mexican

---

29/ Ibid., p. 9.

30/ Ibid., p. 31.

farm laborers, because some of them are illegal aliens and migrant workers, who are difficult to survey. 31/

Puerto Ricans, another subgroup with low formal educational attainment, have the lowest proportion of managers and administrators (3.9 percent); nor are they much better represented than Mexicans in professional and technical occupations (8.6 percent). Like Mexicans and Cubans, a fifth of Puerto Rican workers are nontransport operatives.

Two subgroups with higher educational levels, Cubans, followed by Central or South Americans and other Hispanics, have the greatest representation in the professional and technical category (15.2 percent and 12.7 percent, respectively). The proportion of Cubans approaches that of U.S. workers in this category, but, as previously indicated, the proportion of Cubans who are lesser skilled nontransport operatives is double the figure for U.S. workers. Central or South Americans and other Hispanics are statistically overrepresented in service occupations (child care, cleaning, cosmotology, food service, protective service, etc.). About 21.0 percent of this subgroup, compared with 13.8 percent of employed persons in the United States, are service workers.

According to Table 9, the 1984 average annual unemployment rate in the Hispanic labor force was over 40.0 percent higher than in the U.S. labor force (10.6 percent versus 7.5 percent). Among Hispanic subgroups, unemployment rates ranged from 13.3 percent for Puerto Ricans to 7.9 percent for Cubans, the latter rate differing little from that in the U.S. labor force. As noted earlier, lower unemployment among Cubans has been attributed to the older age structure and higher educational attainment of Cuban workers, relative to Mexicans or Puerto Ricans. 32/

Source: The total population and the population of Hispanic origin or descent for each State and congressional district in Appendices A through C are from the 1980 Census of Population and Housing. (U.S. Dept. of Commerce. Bureau of the Census. Data User Services Division. Census of Population and Housing, 1980. Summary Tape Files [STF] 3D, 3H. Washington, D.C., Bureau of the Census, 1982.) STF 3D has data for the 98th Congress, and STF 3H has data for 10 States where congressional district boundaries changed for the 99th Congress. The 1980 census data have been reaggregated to conform to these changes. Percentages and ranks were computed on the Library of Congress's central computer.

The 1980 census data in the appendices are based on a 20 percent sample of the U.S. population. For this reason, the totals may differ slightly from the numbers published in some census tables, which are based on a 100 percent count.

In each appendix, the highest rank by number or percent is one. The ranks of congressional districts in Appendix C are for the entire United States, not for the States separately.

Appendix A shows the number and percent of the total Hispanic population and of each Hispanic subgroup who live in each State.

APPENDIX B. The Hispanic Population and Hispanic Subgroups, by State
